Summary

Senior software engineer, eight years in, who writes the feature and then owns the platform under it. The last two years went to a Rails translation product, its LLM engine layer, its move onto ECS Fargate, and the credits that meter it. Usually the one who finds out why production broke.

Work Experience

OnTheGoSystems

Remote (Hong Kong)

Senior Software Engineer

Dec. 2024 - Sep. 2026

- Built much of the Rails translation engine layer across Claude on Bedrock, OpenAI and Gemini: fallback chains when a provider fails, JSON repair, Langfuse tracing, and retries for the rate limits behind 65% of review failures.
- Shipped an agent-driven triage platform for production exceptions, solo in 12 weeks. Its pass/fail call lives in code, not the prompt, and caught three false passes when replayed on past incidents.
- Built read-only production tools for AI agents, with a rollback wrapper, an audit log and a human-only write gate, then the investigator and critic agents that adjudicate support claims.
- Migrated the product from a single EC2 host onto ECS Fargate, then owned that platform and its Terraform for 16 months, running 90% on Spot.
- Replaced ECS autoscaling with a queue-depth autoscaler on Lambda that drains workers rather than stopping them, because scale-in kills tasks abruptly and these jobs run from 30 seconds to 2 hours.
- Traced Aurora MySQL at 100% CPU to a status broadcast whose query plan examined 7.33M rows per call; dropped the join and throttled it from 1,013 calls to about 100.
- Owned credits and billing correctness for a metered LLM product, then designed one authorization architecture to replace its scattered credit checks (4 ADRs, first step shipped).
- Wrote the ISO 27001 audit checklist and the risk profiles behind it, then built the disaster recovery and data loss prevention programs to a documented 2-hour RTO and 15-minute RPO.

Dailymealz

Riyadh, Saudi Arabia

Senior Software Engineer

Dec. 2021 - Dec. 2024

- Built the real-time order service behind a 100,000 daily-user delivery product, on Node.js and Socket.IO, pushing kitchen preparation, driver pickup and delivery status to mobile and web clients.
- Integrated it with the Laravel monolith over SQS, consuming pushed order state changes and fanning them out to subscribed clients.
- Served hot order state from Redis as the service's read source with MySQL behind it, keeping status fan-out off the transactional path.
- Migrated the service from JavaScript to TypeScript.
- Led a team of 5 developers in implementing a background location check-in system for the driver app, improving route efficiency.
- Increased system observability by adding monitors on main flows using Datadog and OpenTelemetry, which contributed to a 30% decrease in Mean Time To Resolve.

Nformacy

Cairo, Egypt

Full-Stack Developer

Oct. 2020 - Dec. 2021

- Led features from business requirements to deployment, backend and frontend.
- Moved the web apps to a SaaS model and built mentor booking with Zoom, ClickUp and calendar integrations.
- Wrote BDD tests in Cypress and managed cloud infrastructure and deployment pipelines.

DevSquads (formerly Fikr Labs)

Cairo, Egypt

Software Engineer

Jan. 2018 - Oct. 2020

- Built software in self-organizing Extreme Programming teams, using TDD, thin vertical slices and test-covered refactoring of legacy code.
- Developed across React Native for mobile, Ruby on Rails and Java Spring for backend, and React for frontend.
- Mentored teams in adopting XP and Agile practices, which shortened delivery cycles and reduced technical debt.

Skills

Programming Languages	Ruby, TypeScript, JavaScript, Python, SQL, PHP
Backend Development	Ruby on Rails, Node.js, Express, Socket.IO, REST APIs, background workers, FastAPI
Frontend Development	React, Next.js, Redux, Hotwire (Turbo & Stimulus), React Native, Tailwind CSS
AI & LLM	AWS Bedrock, OpenAI, Gemini, Claude Agent SDK, MCP, Langfuse, prompt versioning, evaluation harnesses
Cloud & Infrastructure	AWS (ECS Fargate, Lambda, SQS, Step Functions, CloudWatch, S3, IAM), Terraform, Docker, GitLab CI
Databases	Redis, MySQL & Aurora, PostgreSQL, DynamoDB
Testing	RSpec, Capybara, Playwright, Cypress, Jest, VCR
Spoken Languages	English, Arabic (native), German (beginner)

Education

Faculty of Science Cairo University	Cairo, Egypt
Bachelor of Science in Geophysics	Sep. 2012 - Jun. 2016
