GitLab Hiring Team

October 14, 2026

GitLab Inc.
Remote — EMEA

Job Application — Intermediate Backend Engineer, Agent Foundations (Duo Agent Platform)

Dear GitLab Hiring Team,

About Me

Senior software engineer with 8+ years owning production systems end to end. At OnTheGoSystems I own the agentic triage platform handling first-line incident and support inquiries, plus the guardrails it runs behind: an MCP server exposing live databases, logs and selected APIs through authenticated, monitored access, adopted as the team's standard agent integration path. I also own the GitLab CI pipelines covering build, e2e tests, SAST and deploy gates for every service in the product.

Why GitLab?

Agent Foundations is building at platform scale what I have built for one product: how agents are created, connected to tools, executed and observed. I have taken that stack from prototype to the team's default path, and I want to apply it where it shapes how the world ships software, not one company's support queue. GitLab's async-first, EMEA collaboration matches how I have worked remotely for four years, and treating AI as a core productivity multiplier is how I work daily, not a slogan.

Why Me?

Ruby on Rails and RSpec from XP teams at DevSquads, where I built with TDD and mentored engineers on pairing and review discipline. I design REST API contracts for services that outlived their monolith, and I clear databases query by query: an Aurora backlog that turned CPU pressure into incidents stayed closed until the plans and indexes were right. I use AI tools every day — agentic workflows, MCP, evals and tracing are my current stack. When production breaks I fix the root cause: instrumenting order, driver and kitchen flows cut Mean Time To Resolve by 30% at Dailymealz.

Sincerely,

Abdelwahab Mahmoud
