Summary

Senior Full Stack Platform Engineer with 8+ years building production systems, the last five on AWS.
I design, build and run backend services end to end: Node.js/TypeScript behind a 100K-daily-user delivery product and the LLM translation and agent platform for WPML, on 1.5M+ WordPress sites. The stack is ECS Fargate, Lambda, SQS, DynamoDB and Terraform, with React/Next.js for the interfaces and Aurora and Redis underneath.
I take a feature from architecture to deployment to reliability, and teammates count on me when things break.

Work Experience

OnTheGoSystems (WPML)

Remote

Senior Software Engineer — *Dec 2024 - Sep 2026*

- Built WPML's translation platform: a multi-provider LLM engine (Bedrock, OpenAI, Gemini) with fallback chains and JSON repair.
- Added a translation-memory RAG (pgvector, HNSW) that reuses near-duplicate translations in OCR detection.
- Owned an agentic triage platform for first-line incident and support inquiries, cutting Mean Time To Resolve.
- Built an MCP server gating live databases, logs and APIs behind authenticated, monitored access.
- Built a credit-based billing system: a prepaid balance authorized and charged per LLM request, with usage metering.
- Replaced ECS autoscaling with a queue-depth Lambda autoscaler that drains jobs (500K jobs/hour peak vs ~5K baseline).
- Migrated the product to ECS Fargate and own the platform and its Terraform.
- Rewrote concurrency-heavy workers in Go, lifting throughput on high-volume translation jobs.
- Owned the GitLab CI/CD pipelines (build, e2e, SAST, deploy) for every service.

Dailymealz

Riyadh, Saudi Arabia

Senior Software Engineer — *Dec 2021 - Dec 2024*

- Built the real-time order service for a 100K daily-user delivery product (Node.js, Socket.IO), caching hot order state in Redis over MySQL.
- Built distributed order-fulfillment microservices (orders, kitchen, driver) as standalone Node.js/Express on AWS SQS, extracted from a PHP/Laravel monolith.
- Built fleet tracking for live driver locations and check-ins, feeding dispatch; led a team of 5 on the driver app.
- Cut Mean Time To Resolve 30% instrumenting order, driver and kitchen flows with Datadog and OpenTelemetry.
- Migrated the order service from JavaScript to TypeScript, so payload mismatches fail at compile time.
- Built the React Native apps (kitchen, driver, admin) and maintained the Next.js web app.

Nformacy

Cairo, Egypt

Full-Stack Developer — *Oct 2020 - Dec 2021*

- Led full-stack features from requirements to deployment, and moved the web apps to a SaaS model.
- Built mentor calendar booking with Zoom, ClickUp and calendar integrations.
- Wrote BDD tests and managed CI/CD pipelines.

DevSquads (formerly Fikr Labs)

Cairo, Egypt

Software Engineer — *Jan 2018 - Oct 2020*

- Built across React Native, Ruby on Rails, Java Spring and React in XP teams using TDD, pairing and thin vertical slices.

Skills

Languages	TypeScript, JavaScript, Node.js, Go, Python, PHP, Ruby, Java (Spring), SQL
Backend & APIs	microservices, async/distributed processing, SQS, Kafka, Redis
AI & LLM	AWS Bedrock, OpenAI, Gemini, agentic workflows, tool calling, MCP, RAG, embeddings, pgvector (HNSW), evals, LLM cost optimisation
Cloud & Infrastructure	AWS (ECS Fargate, Lambda, SQS, Step Functions, DynamoDB, S3, IAM, CloudWatch), Kubernetes, Terraform, Docker, GitHub Actions, GitLab CI
Databases	PostgreSQL, MySQL, Aurora, DynamoDB, Redis, ClickHouse
Testing & Observability	TDD, spec-driven development, Playwright, Cypress, Jest, RSpec; Datadog, OpenTelemetry, Langfuse
Frontend	React, Next.js, Redux, React Native, Tailwind CSS, Hotwire (Turbo & Stimulus)
Spoken Languages	English, Arabic (native)

Open Source Projects

ecs-drain-scaler *2026*

- **AWS (ECS, SQS), Terraform, Go**. Queue-depth autoscaler: SQS backlog drives Fargate scale; a drain protocol keeps scale-in from killing a task mid-job.

handoff-mcp-server *2026*

- **TypeScript, MCP**. Persists a coding agent's task context as a validated briefing, restored next session.

Education

B.Sc. Geophysics, Cairo University *2012 - 2016*
