Summary

Senior Full Stack Platform Engineer with 8+ years building production systems, the last five on AWS.
I design, build and run backend services end to end: Node.js/TypeScript behind a 100K-daily-user delivery product and the LLM translation and agent platform for WPML, on 1.5M+ WordPress sites. The stack is ECS Fargate, Lambda, SQS, DynamoDB and Terraform, with React/Next.js for the interfaces and Aurora and Redis underneath.
I take a feature from architecture to deployment to reliability, and teammates count on me when things break.

Work Experience

OnTheGoSystems (WPML — WordPress plugins)

Remote (Hong Kong)

Senior Software Engineer — *Dec 2024 - Sep 2026*

- Built the multi-provider translation LLM engine behind WPML (Bedrock, OpenAI, Gemini): fallback chains, JSON repair, rate-limit retries.
- Migrated the product to AWS ECS Fargate; own the platform and its Terraform (peak 100K requests/hour).
- Replaced ECS autoscaling with a queue-depth Lambda autoscaler (DynamoDB deployment state store) that drains jobs instead of killing them, sustaining 500K jobs/hour at peak against a 5K/hour baseline.
- Owned WPML's main translations management page in React, delivering the full-featured translation view.
- Built an MCP server gating live databases, logs and APIs behind authenticated, monitored access.
- Owned an agentic triage platform handling first-line incident and support inquiries, cutting Mean Time To Resolve.
- Cut Aurora MySQL CPU pressure by rewriting hot queries and adding covering indexes.
- Fixed database lock contention under concurrent writes with advisory locks and batch-processing rewrites.
- Owned the authorization architecture for a metered LLM product, replacing scattered permission checks.
- Owned the GitLab CI/CD pipelines: build, e2e test, SAST and deploy gates for every service in the product.
- Kept plugin APIs backwards compatible across releases with deprecation paths and contract tests.

Dailymealz

Riyadh, Saudi Arabia

Senior Software Engineer — *Dec 2021 - Dec 2024*

- Built the real-time order service behind a 100K daily-user delivery product, pushing status to clients over Node.js and Socket.IO.
- Built the fulfillment backend as a standalone Node.js/Express service on AWS SQS, extracted from the PHP/Laravel monolith.
- Migrated the real-time order service from JavaScript to TypeScript, so payload mismatches fail at compile time.
- Cached hot order state in Redis (write-behind) over MySQL, keeping status fan-out off the transactional path.
- Cut Mean Time To Resolve by 30% by instrumenting order, driver and kitchen flows with Datadog and OpenTelemetry.
- Built the React Native mobile apps (kitchen, driver, admin) and maintained the Next.js web app.
- Led a team of 5 building a driver location check-in system: planning, reviews and pairing across the driver app.

Nformacy

Cairo, Egypt

Full-Stack Developer — *Oct 2020 - Dec 2021*

- Led full-stack features from requirements to deployment, and moved the web apps to a SaaS model.
- Built mentor calendar booking with Zoom, ClickUp and calendar integrations.
- Wrote BDD tests and managed CI/CD pipelines.

DevSquads (formerly Fikr Labs)

Cairo, Egypt

Software Engineer — *Jan 2018 - Oct 2020*

- Built across React Native, Ruby on Rails, Java Spring and React in XP teams using TDD, pairing and thin vertical slices.
- Mentored teams adopting XP and Agile practices: pairing, code review discipline, iterative planning.

Skills

Programming Languages	Node.js, TypeScript, JavaScript, PHP, Go, Ruby, Java (Spring), Python, SQL
Backend Development	Node.js, Ruby on Rails, REST API design, service-oriented architecture, SQS, Kafka
Frontend Development	Next.js, React, Redux, Hotwire (Turbo & Stimulus), React Native, Tailwind CSS
AI & LLM	AWS Bedrock, OpenAI, Gemini, agentic workflows, Claude Agent SDK, MCP, Langfuse, evals
Cloud & Infrastructure	AWS (ECS Fargate, Lambda, SQS, Step Functions, CloudWatch, S3, IAM), Kubernetes, Terraform, Docker, GitHub Actions, GitLab CI
Observability	Datadog, OpenTelemetry, AWS CloudWatch, Langfuse tracing
Databases	PostgreSQL, MySQL, Aurora, Redis, DynamoDB, ClickHouse
Testing	TDD, Spec-driven development, RSpec, Capybara, Playwright, Cypress, Jest, VCR
WordPress & Compatibility	WPML ecosystem, plugin update safety, backwards compatibility, i18n
Spoken Languages	English, Arabic (native)

Open Source Projects

ecs-drain-scaler

https://github.com/Abdelwahab313/ecs-drain-scaler *2026*

- **AWS (ECS, SQS), Terraform, Go**. Open-sourced the queue-depth autoscaler pattern built at WPML: SQS backlog drives Fargate scale, and a drain protocol keeps scale-in from killing a task mid-job. Chose Lambda over Application Auto Scaling so jobs drain instead of dying; tested, with the trade-offs written up as ADRs. Apache-2.0.

handoff-mcp-server

https://github.com/Abdelwahab313/handoff-mcp-server *2026*

- **TypeScript, MCP**. MCP server that persists an AI coding agent's task context as a validated briefing, restored on the next session.

Education

Faculty of Science Cairo University *Cairo, Egypt*

Bachelor of Science in Geophysics *Sep 2012 - Jun 2016*
